

Integrating HSStream with your existing video program

One connection, and you're live.

If your school already has an existing video program, you are unlikely to invest in a new HSStream package. However, that does not mean you have to rule out live streaming. Using one simple encoder box, you can take the output of your existing production setup and get it online using HSStream.

We'll put the pieces together.

Your video department's existing setup may include a mix of computers, switchers, and cameras, but not everything you need to broadcast live. HSStream can work with you to find the missing pieces, and build a complete broadcasting system around what you already have. This option results in a custom setup that is built to your specifications, while also saving you money.

After integrating HSStream with your existing video program, your school will be able to quickly and easily produce live broadcasts of every event. With HSStream, Dad can stream the basketball game from work, Grandma can hear the band concert from across the country, and the community can watch the school board meeting from home. Once your custom setup is built and delivered, your services fee includes a hands-on training session, tech support, a custom HSStream website, and so much more.
